Moisturizers for Combination Skin

Skin of all types should remain moisturized. A considerable degree of dampness should be maintained to make skin less liable to infections that tend to attack the skin. (Here's where you can find more detailed information on skin care and skin lightening cream.)

While we consider that both skin types, oily and dry, require a certain level of moisture, the oily portion demands greater care and intensive cleansing.

Greasy skin is more prone to bacterial attacks resulting to acne for bacteria thrive on these areas. Oil produced by your sudoriferous glands (oil glands) contains cellular debris which is an excellent breeding ground for bacteria.

If your skin is too oily, bacteria may feed on this part and multiply as a result of continued nourishment. If any of these microorganisms gets in the way to the skin pore, multiply and deposit sedimentary toxic material, it clogs the pore and eventually initiates infection. (Here's where you can find more detailed information on skin care and stretchmark removal cream.)
